

PV Auto Change Over Switch

The Microcare PV Auto Change Over Switch allows one to install a solution that will allow you to use your Solar panels when the Grid Tied inverter Powers down during Load shedding during daylight hours.

By law the Grid Tied inverter must power off when there is load shedding or Grid maintenance. This causes a total loss of power generation during this time. The Microcare PV Auto Change Over Switch avoids the total loss and allows one to use the solar panels to keep the batteries charged.
