KEY FEATURES

Charge Direct from the Sun

Charge directly from solar DC power, without relying on the grid or an inverter.

No Double Conversion

Most DC Fast Chargers convert DC → AC → DC. Our charger skips the AC step, allowing 95% efficiency.

Optional Battery Backup

Add battery storage to charge anytime, when sunlight is limited, or at night.

Local WiFi Monitoring

Monitor charging sessions locally over WiFi, with no cloud account or monthly fees.

Multi-Station Load Sharing

Multiple chargers can share available solar or battery power intelligently.

OCPP 1.6J + CCS2

Connects to any compliant management platform & Uses the standard CCS2 charging plug.

PERFECT FOR

Off-grid homes & rural smallholdings

Day-parked fleets charging from the office roof

Eco-conscious drivers wanting truly green miles

Lodges & guesthouses offering guest charging

Suburban homes with big roofs & high mileage

Load-shedding areas needing grid-independent charging

✓ Built in South Africa since 1990

✓ Works with your solar setup
